## APP - 13 Pompon making machine

## Machine application:

The machine of production pompoms APP-13 is intended for production of decorative pompoms from yarns. Received pompoms are finding application in the branch textile chiefly as the decorative element of caps, bandannas and for other decorative purposes.

## Machine description:

It is possible in the semi-automatic process to separate occurring stages from forming of the pompom:

- manual arranging of the winding reel binding threads in the groove
- automatic winding of the determined number of coils yarns on the reel prepared previously
- wound round the automatic intersection on the reel yarns along with dragging the binding thread
- manual cutting of the binding thread and removing the ready pompom

The electronic meter of coils was applied to the machine yarns wound on the reel what is guaranteeing dimensional repeatability of produced pompoms. Were foreseen also preliminary moisturizing of the cotton binding thread whom he is purposing more precise belting of cut fibers after drying, but the same bigger life of the product.

Occurring buttons were put on the control panel:

- START WINDING - causing the launch of the process of winding of the determined number of coils yarns on the reel
- START CUTTING - pair of buttons whom, it is possible from the security consideration 'with' to squeeze only on two hands - is running the revolving knife of the intersection wound yarns on the reel
" CUTTING SPEED SWITCH - when "0" - the knife is being pulled out slowly (recommended for large pompon production), when "l" the knife is being pulled out and pulled in quickly (recommended for small pompon production)
- FUNCTION OF KNIFE SHARPENING

In the back side of the machine, a special stand for yarn packages, envisaged for 6 or 8 bobbins, has been placed.

## Technical data of pompon making machine APP-13:

| Description: | Unit: | Quantity: |
| :---: | :---: | :---: |
| Pompon diameter received on bobbins with core diameters (cd)*: $\begin{aligned} & \text { - cd } 7 / \operatorname{cd} 8 \\ & \text { - cd } 9 / \operatorname{cd~} 10 \\ & \text { - cd } 12 / \operatorname{cd} 14 \\ & \text { - cd } 16 / \operatorname{cd} 20 \\ & \text { - cd } 22 / \operatorname{cd~} 25 \\ & \text { - cd } 30 / \operatorname{cd} 35 \\ & \text { - cd } 38 / \operatorname{cd} 40 \\ & -\operatorname{cd~} 45 / \operatorname{cd~} 50 \end{aligned}$ | mm | $30 / 35$ <br> $35 / 40$ <br> $50 / 60$ <br> 65 / 70 <br> $80 / 90$ <br> $110 / 125$ <br> $150 / 160$ <br> „bell" |
| Max. numer of laps to be wound | laps | 999 |
| Number of threads to be wound simultaneously | pcs | max. 8 |
| Max. spindle speed of rotation (stepless regulation) | rev/min | 2500 |
| Recommended dimensions of tying-up thread (ball) dout x length | mm | $100 \times 90$ |
| Dimensions of yarn packages containing raw-material $d_{\text {out }} \mathrm{x}$ length (it is recommended to use packages on conical bobbins) | mm | $180 \times 220$ |
| Average output of the machine (depending on pompon size) | pcs/h | $\sim 120$ |
| Overall dimensions (length x width x height) Plate height | mm | $\begin{gathered} 1115 \times 830 \times 1270 \\ 810 \end{gathered}$ |
| Weight of the machine | kg | 90 |
| Power installed | kW | 0,5 |
| Power supply | V | 1Ph 230 N/PE |
| Nominal current | A | 2,5 |
| Control voltage | VDC | 24 |
| Supply voltage frequency | Hz | 50-60 |
| Noise level in the place of work | dB | 60 |
| *3 spools are supplied with the machine |  |  |
